TITLE: HEIGHT ADJUSTING DEVICE OF DISPLAY

Abstract:

The present invention relates to a height adjusting device of a display. The height adjusting device of the display comprises a holder extended downwardly from the display; a main body having a supporting member slidably inserting the holder, and a connecting member closed and spaced to/from the holder, and a supporting spring elastically supporting the connecting member with respect to the holder. Further, the main body is provided with an operating button and an exposure hole to expose the operating button.
